Problem Memory utilization on these machines is very high. They are currently being monitored to observe the memory utilization, and we have noted many zombie and run-away processes.			
Proposed Solution Do weekly reboots of these systems on Mondays at 5:00AM. This will flush out all zombie and run-away processes and start the machines out fresh at the beginning of each week. This is with the intention that more miniDAAC machines will be added to the weekly reboot at later times via later CCRs.
